

CLAIM(S):

1. A method for creating a CD index print label comprising:
digitizing photographic images to produce digital image data;
storing the digital image data on a digital disk medium;
providing, on a disk surface of the digital disk medium, images
based upon the digital image data, so that the images
represent contents stored on the digital disk medium.
2. The method of claim 1 wherein the surface images are provided by
printing them directly on the disk surface.
3. The method of claim 1 wherein the surface images are provided by
printing on a label sticker and adhering the label sticker to the disk surface.
4. A photo CD comprising:
a CD containing digital image data representing a plurality of
photographic images;
an array of printed images on a surface of the CD, the printed
images corresponding to the plurality of photographic
images represented by the digital image data stored on the
CD.
5. The photo CD of claim 4 wherein the array of printed images
representing the plurality of photographic images is printed directly onto the surface
of the CD.
6. The photo CD of claim 4 wherein the array of printed images
representing the plurality of photographic images is printed on a label sticker that
is then affixed to the surface of the CD.
7. The photo CD of claim 4 wherein each image in the array contains
an image number which corresponds to a location of the digital image data on the
CD.
